AcuScen Safe, non invasive, drug free pain relief

The usual early warning signs of looming medical problems are pains, symptoms and the body's loss of ability to heal itself.

It is well documented that pain left unmanaged, can lead to a decline in health, reduce mobility and increase social isolation.

It is equally well known that many pain sufferers in particular, end up being over-medicated and under-treated, because their treatment deals with blocking pain signals to the brain (the symptom), rather than dealing with the problem at a cellular level (the cause).

The cause of pain, which is generally due to impaired cell function, is the area of treatment that AcuScen helps with. This same principle applies to wound and stress conditions.

Now you have the chance to give yourself an opportunity to enjoy life again, take control of your life with AcuScen treatments that work to complement your body's immune system, employing clinically proven technology to bring you lasting relief.

Good Cell function is vital

The human body relies on a healthy cell network to avoid poor circulation, declining performance, premature ageing and degenerative diseases.

Normal cell functioning and energy levels can be achieved with the use of electrical pulses that actively stimulate metabolism in cells, increase oxygen absorption and accelerate the removal of toxic chemicals and waste. This empowers the body to recover its self-healing capabilities.

Almost all illness is the result of impaired cellular function. A healthy cell operates at a voltage between 70-110mV in order to produce ATP molecules (Adenosine Triphosphate), which are vital for a healthy body.

With an AcuScen treatment, an electrical pulse simulates the natural electrical pulses of the body restoring cellular function. Real time **bio-feedback** ensures the pulse parameters are modified to reflect changes in the body during treatment.

When someone suffers a trauma or illness of any kind then cell function is compromised to varying levels, depending on the overall fitness and health of the individual concerned.

In this type of occurrence, the body may need help to enable it to maintain the necessary levels of cell activity.

This in turn helps to reduce pain and inflammation, actively encouraging the healing process, reducing stress-induced pain and discomfort that traumas or wear and tear inevitably bring.

What AcuScen does

Influences cell behaviour by inducing electrical changes around and within the cell wall membrane by penetrating body tissue with pre-programmed electrical pulse therapy controlled by software algorithms delivered through electrodes placed on the skin. The resulting improved blood supply increases oxygen pressure, which activates and regenerates cells.

How AcuScen works

AcuScen therapy encourages your body's self-healing capabilities by enhancing the efficiency of introducing essential chemicals and proteins into the blood stream, simultaneously increasing the oxygen content of your blood to help transport these vital ingredients to combat all manner of physical problems, with a gentle, non-invasive, painless therapy.

Extra Benefits

AcuScen therapy also encourages production of natural antioxidants to hamper and even stop the process of free radicals proliferation within the body. Free radicals are dangerous and can cause serious damage to your health as they cause almost all major diseases if unchecked.

AcuScen therapy has a ripple effect that activates biological processes in the body which will work on your health problem for the next 24 hours.

As there are no known side effects, it is safe to use the product for up to 40 minutes with a gap of a minimum of three hours between treatments.

Some precautions should be taken if you are pregnant and do not use if you have implanted electrical equipment such as a pacemaker.

It is now well known that variable frequencies are needed to penetrate different layers of skin and tissue for deep problems.

With AcuScen electrical pulse therapy the number of pulses in a block is known as depth, the number of blocks per second is known as frequency. When the problem is deep inside the skin or muscle a variable depth and variable frequency is needed to stimulate the different layers. With AcuScen this is known as Double Variable (Dvar) mode. The double variable mode is also used on acupuncture points or can be stroked along meridians to give an AcuScen massage.

Over the last thirty years, extensive research by medical doctors and practitioners world wide have developed effective treatment protocols for all manner of conditions.

AcuScen features real time **bio-feedback**. Readings can be taken to assist in determining the exact treatment area and indicate when a treatment is complete. With suitable training a therapist can make these adjustments, for self treatment these settings are adjusted automatically in Auto mode.

AcuScen is safe, non-invasive, drug free treatment for pain relief using proven technology to assist with cell function helping the body to heal itself.
